50 GB

* Data was collected in a controlled environment. Actual experience may vary. For details, refer to the product page on the official DJI website.
1. The camera can operate for up to 90 minutes on its own. When connected to the Multifunctional Vision Dock, the operating time can extend to up to 200 minutes.
2. When capturing 360° content, Osmo 360 II's CMOS sensor features an imaging area equivalent to that of a 1-inch CMOS sensor with a 4:3 aspect ratio.
3. Different light refraction between water and air impacts image stitching. To shoot 360° video underwater, always use the Invisible Waterproof Case, regardless of depth. This prevents stitching issues from affecting your video.
4. Avoid using the camera in environments with high water impact, hot springs, or extreme underwater conditions. Do not let it come into contact with corrosive or unknown liquids.
5. IPX4 water resistance is only available when the Multifunctional Vision Dock is attached to the camera.
6. For details on relevant tests and usage suggestions for the camera and the waterproof case, refer to the product page on the official DJI website.
